

Craftable CR1203 flower

Materials

- Handmade paper
- Craftable CR1203
- glue
- tweezers

Method

1. Cut out 5 flowers using the Craftable CR1203. Cut the petals to the center of each flower. Get two flowers and bend every petal.

2. Take one bended flower and put some glue inside of it. Fold and roll the flower until you get a flower bud.

3. Take second bended flower, put some glue inside and stick it to the flower bud. Gently spread apart the ends of the petals.

4. Take 3 flowers and bend the edges of each petal with a tweezers like shown on the photo, up and down around the tweezers. Bend every petal down in the middle.

5. Put a little glue on the inside of every flower and stick them one by one to the flower bud you made of the first two flowers. To make the rose lifelike glue the petals alternately, so that the edges of each next petal do not overlap. When you're finished adjust the petals if they look too flat. Your flower is now ready!
