

Craftable CR1202 flowers

Materials

- Handmade paper
- Craftable CR1202
- glue
- pen, stick and stamens

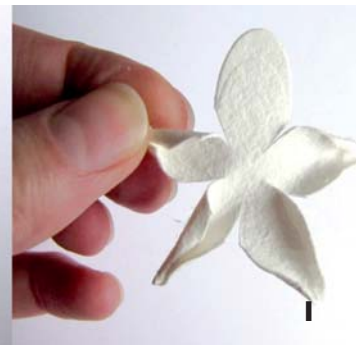

Method Flower 1

1. Cut out 1 big and 2 small flowers from the Craftable CR1202. Cut the petals to the center of the flower. Use a stick to bend every petal down.

Method Flower 2

1. Cut out two flowers of the Craftable CR1202 and cut the petals to the center of the flower. Lightly mist the flowers with a little bit of water and gently twist the petals between your fingers.

2. Make a hole in the center of the flower. Use a silicon mat or any other soft surface and press the big flower to lift the petals. Use the pen to round up the petals.

2. Gently unwind the petals and leave the end twisted. Let the flowers dry completely. Punch a hole in the middle of the flowers with a stick.

3. Put a bundle of stamens into the holes of the smaller flowers. Put some glue onto the bigger flower and press all the parts together. The flower is ready to use.

3. Put a little bit of glue in the middle of one flower and stick them together. Press the stamens through the hole. And your flower is finished!
